

# ROUNDIT V0 EMI – A zero-halogen shielding solution

Tin-plated copper strands are woven to provide high conductivity and ensure EMI shielding

Flame retardant polyester monofilaments ensure a highly flexible assembly

**ROUNDIT**<sup>®</sup>  
PROTECTIVE CABLE WRAP

**Federal-Mogul Systems Protection is proud to announce ROUNDIT® V0 EMI to our shielding protection product line.**

This zero-halogen self-wrapping sleeve is designed for high performance EMI shielding of wire and cable bundles. It is manufactured from UL 94 V0 rated polyester monofilaments and tin plated copper wires according to EN 13602, Quality A. Rated at 150°C, this wrappable design easily accommodates breakout areas and provides ease of removal when inspection or maintenance of cables is necessary.

The stable construction guarantees the same level of EMI shielding throughout the coverage area and is easy to cut without any end-fray. As an additional benefit, ROUNDIT V0 EMI enables users to stock a limited range of sizes to cover a wide range of cable and wire diameters.

The product is now in full production in sizes 8, 13, 19, 25, 32, and 45. To get a copy of our product data sheet, please click [here](#).
